

DEFINE PROBLEM STATEMENT

Project Title:

Flood Prediction System using Machine Learning

Problem Statement

Floods are one of the most destructive natural disasters, causing significant loss of life, property, and infrastructure every year. Existing warning systems are not always accurate and often fail to provide timely alerts.

This project aims to develop a machine learning-based Flood Prediction System that predicts flood risk using rainfall and weather parameters. The system helps authorities make informed decisions and issue early warnings to reduce flood-related damage.

Objectives

- Predict flood occurrence accurately.
- Analyze rainfall and environmental conditions.
- Support disaster management teams.
- Provide a simple and user-friendly web application.
