

Project Title:

Flood Prediction System using Machine Learning

Project Domain:

Artificial Intelligence & Machine Learning

Selected Idea:

Developing an AI-powered flood prediction system using rainfall and environmental data.

Reason for Selecting This Idea:

- Floods are dangerous natural disasters.
- Early prediction can save lives and property.
- Machine learning improves prediction accuracy.
- Useful for disaster management authorities.
- Real-world application with social impact.

Technologies Planned:

- Python
- Streamlit
- Pandas
- Scikit-learn
- XGBoost

Expected Output:

A smart web application that predicts flood risk based on weather and rainfall conditions.
