

PROJECT EXECUTABLE FILES

Project Title

Rising Waters

Project Subtitle

AI-Powered Flood Prediction System using Machine Learning

Introduction

Rising Waters is a Machine Learning-based web application that predicts flood risk using rainfall and weather parameters. The project consists of executable files required to run the application successfully.

Project Executable Files

1. app.py

The main Streamlit application that provides the user interface and prediction functionality.

2. model.pkl

The trained Machine Learning model used to predict flood risk.

3. requirements.txt

Contains all Python libraries required to run the application.

4. Dataset

Historical rainfall and weather dataset used for training and testing.

5. README.md

Contains project description, installation steps, and usage instructions.

6. GitHub Repository

Stores the complete project source code and documentation.

Execution Steps

Step 1

Install all required Python libraries using requirements.txt.

Step 2

Open the project folder in VS Code.

Step 3

Run the command:

```
streamlit run app.py
```

Step 4

Open the application in a web browser.

Step 5

Enter rainfall and weather parameters.

Step 6

Click Predict Flood Risk to view the result.

Advantages

- Easy project execution
- Simple installation process
- Fast deployment
- User-friendly interface
- Reliable Machine Learning prediction

Conclusion

The executable files provide everything required to run and deploy the Rising Waters application successfully.
